

EDUCATION

University of Southern California | Los Angeles, CA Exp. May 2027
M.S. in Computer Science, specialization in Game Development

University of Wisconsin-Madison | Madison, WI 2022 - 2025
B.S. in Computer Science | Minors: Game Design and Mathematics

TECHNICAL SKILLS

Programming Languages: C#, Python, Lua (Luau), Java, C++, JavaScript/TypeScript (React, HTML, CSS), SQL
Tools & Technologies: Unity, Roblox Studio, Unreal Engine, AWS (Personalize, S3), Git, Perforce, React, Agile

PROJECTS

Phrontiers | Roblox Game, In Development Feb 2026 - Present
Luau, Roblox Studio, Python, Blender

- Co-developing a 1v1 strategy game where players spend resources to deploy units that march on the enemy base; the server simulates the entire battle 10 times a second and re-checks every player action, so clients cannot cheat
- Fixed a bug where units responding to the same game-state snapshot would incorrectly collapse into a single-file line
- Built the roster of 28 units across 4 factions, the drag-to-place deploy controls, and a bot opponent for solo play

Crease | USC Advanced Games Project Jan 2026 - Present
Unity, C#

- Developing a 3D flight game about a father and daughter who send letters to each other, as one of six engineers on a 40-person USC Games team
- Implemented a paper plane unfolding mechanic to revert back into a readable letter, added full controller support, and wind ribbons using VFX Graph

The H.U.G.S. Protocol | 3D Puzzle-Platformer, released on itch.io Jan 2026 - May 2026
Unity 6, C#, Perforce

- Programmed the three ball abilities, sonar, tungsten, and sponge, that every puzzle in the game is designed around; two-person team, concept through public release on itch.io
- Co-designed the levels and puzzles around how those abilities interact, reworking them between playtests

Environment Distributor | Snake World Sep 2025 - Dec 2025
Unity, C#, C++

- Engineered a system that generates terrain and scatters foliage across it, using Perlin noise to shape the landscape and Poisson disk sampling to keep plants evenly spaced
- Enforced exclusion radii around the track and scene objects so nothing spawns in gameplay-critical areas; the whole environment regenerates on demand with zero manual placement

SneakyMasters | League of Legends Leaderboard 2026
JavaScript, Vercel Serverless, Vercel KV (Redis), Riot Games API

- Built and shipped a live leaderboard tracking a friend group's climb to Masters, ranking every player on one comparable LP value across all tiers and divisions
- Wrote five serverless functions over the Riot API and stored LP history in Redis so the group shares one live board, with a one-hour client cache to stay inside API rate limits

EXPERIENCE

IndieCade | Game Design Intern, Climate Jam 2026 Jun 2026 - Aug 2026
Unity, C#

- Built a 2D farming game about adapting crops to extreme weather, as one of three programmers on a seven-person remote team
- Owned player movement, the weather system that drives each season's hazards, and the hunger system the survival loop is built on

PBS Wisconsin | Software Engineer, UW-Madison Capstone Jan 2025 - May 2025
React, Python, Flask, Vite, AWS (Personalize, S3), REST API, SQL

- Developed a "recommended for you" feature for PBS Wisconsin's live site with a team of four, training and hosting the recommendation model on AWS Personalize
- Connected the site to the model: send a user ID, get back recommended shows, and fall back to a default list if anything fails
- Turned show descriptions into model features with NLP so the engine could recommend by content similarity, not just view history
- Designed high- and low-fidelity Figma prototypes shaped by 20+ user interviews the team conducted

Target Inc. | Retail & Market Associate Jun 2024 - Jan 2025

- Led the Pickup team to 98% order efficiency and was recognized by management for it
